BURSTER

№2300

Receiving tray stacks sheets so evenly that no jogging is necessary for binding.

This trim, exceptionally quiet-operating Burster will cut each one part forms at the speed of 30 per minute (1800 3 1/2 inch forms per hour). It will cut forms from 2 1/8 to 12 inches and up to 16 inches. It includes 39 established standard forms.

Operators will appreciate the simplicity of this Burster. They quickly learn that turning one knob sets form depth, and two guides easily slide to form width, and it is ready to go. The unique ribbed roller straightens the forms and keeps them running straight. Tension brushes prevent curling or wrinkling of the paper by maintaining even pressure.

All moving parts have a cover to protect them. The machine is used throughout, along with a 1/2 inch diameter roller. It is powered by 115 volt, 50-60 cycle A.C., 5.4 amperes. The machine is 21 1/2 inches high by 21 1/2 inches wide and 40 inches long and it's finished in a non-reflecting Charcoal Gray enamel and weighs a mere 11 pounds.

Here is the first machine that will cut off the faste... machines have been... designed to do one operation... simple adjustment. It is simple to operate... moving parts are shielded by a plexiglass cover to protect operator from possible injury. Handles are provided for easy carrying of this 27 pound machine. Slitter. It will turn at 100 feet per minute... take any width up to 10 inches with... can remove both... from... knives... 11 pound... and... 28... by 3" deep and 10"... by precision built... 110-120 volt power meter.

SLITTER

№2310

Tab Products Co. will sell this equipment. This is the only one department to offer an... illustrated with the forms on... (For information on this version, see Catalog 16 or ask your representative for

This compact, low-cost Deleaver will simultaneously remove the carbon and separate multi-part form sets, neatly re-folding into continuous stacks. It has adjustable chutes and refolding trays to assure the best angle for any weight or size of form. It is easy to load and will handle forms with or without linehole punching—merely flip a switch, start it running with a dial speed control and set the right pace for the form.

FEATURES

1. Versatile. Tab Products Co. Forms Handling Equipment is designed for use anywhere. Quality construction with emphasis on heavy-duty parts where they are needed.
2. All moving parts are enclosed and cutting units are covered for operator's safety.
3. Low in initial cost.
4. Heavy in performance—light in weight.

This versatile, high-speed and heavy duty multi-chute machine will separate up to eight bound parts at 250 feet per minute, while slitting both stubs or midform slitting and re-winding the carbons for clean, rapid disposal, and simply by reversing the switch and adding a chute, it will collate. This versatile machine has a powerful two speed motor that operates at speeds of 135 feet per minute for starting and handling special papers and at 250 feet per minute on normal high speed operation. In addition to the on-off and slow-fast switches, there are jogging buttons to push the forms along when loading. A standard model will handle forms up to 17 inches wide by 12 inches deep, and will slit margins perforated or unperforated, whether they are loose constructed, crimped, stapled or pasted.

4 PART DECOLLATOR #2330

Carbon paper is easily disposed of by a removable fork spindle, eliminating carbon handling and fire risk caused by crumpled carbon paper.

DECOLLATOR ADD-ON #2340

Basic four web unit with this modular construction allows for addition of two web unit. #2340 Decollator two web add-ons can easily be attached at your Tab Department. Additional two web units may be ordered later with no exchange of original equipment.

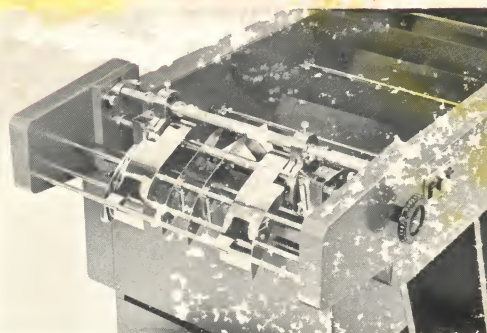

HEAVY DUTY

Pin-wheel feed other than its main bearing has no inter-moving parts, thereby eliminating wear and noise. Feed pins are removable for replacement, should damage occur, with no dismantling. Cutter knives are hard tool steel for extended life, mounted on three-quarter inch shafts to prevent bowing when midform slitting.
